

Frequently Asked Questions

Are the floors slippery when wet?

As with any floor the risk of falling is increased when the surface is wet. Although high gloss these floors perform similar to your average tile however slip resistant additives can be added to the flooring system to enhance anti-slip properties.

Do they scratch easily?

No, the floors are installed with a scratch resistant top coat sealer that protects your design coating. Please be aware that some sealers take longer for full cure than others. Surfaces are **not** at full strength until they have had time to cure fully. Please refer to your installer for further information.

Are they easy to clean?

Yes. The nature of a seamless finish without grout lines means these floors can be cleaned easily and efficiently. You can use steam mops & general cleaning methods.

What designs are available?

Jenflow have a variety of metallic colours available meaning there is almost unlimited design choices. If you prefer a solid colour finish then we can produce any RAL colour of your choice.

Can it be applied to wood?

Yes we have flexible resins suitable for wooden surfaces

Frequently Asked Questions

Is it compatible with underfloor heating?

Yes, Jenflow have various floors installed across the UK & Europe with underfloor heating successfully in place. Furthermore due to decorative resin systems being so thin the heat can travel through easier than a tile creating a more energy efficient floor.

What is the approx. installation time?

Installation time averages around 3 days however this will depend on the size & subfloor prep required. The majority of work carried out for decorative resin floors occurs during the preparation stages.

What areas are suitable?

All interior areas are suitable for both domestic and commercial settings. Popular domestic areas consist of kitchens, bathrooms, hallways, living spaces, conservatories. Commercial areas usually consist of foyers, restaurants, bars & nightclubs etc

Are they hygienic?

Yes decorative floors are very hygienic due to their seamless finish with no grout lines necessary. Therefore dirt has no place to hide. Furthermore anti-bacterial additives can be added to our sealers to reduce the spread of 99.99% of bacteria.

Can they be installed on top of tiles?

The short answer is yes, providing the tiles are well adhered, however we do advise that for greater longevity that tiles are removed. We are aware with budgets & time frames the ability to remove tiles is not always feasible.
